

# Advanced Image Styles

<https://rodsurl.com/ais>

# What We'll Cover

- Planning your image styles — so you don't end up with a confusing mess later
- How Drupal's Focal Point module makes sure the most important part of every image stays visible (even in weird crops)
- Cool extra tools like Image Effects Kit (IEK) (and others) for adding creative image effects
- Incorporating Responsive Images with Focal Point
- How to use image styles right inside CKEditor — so content editors can resize and crop images without breaking a sweat
- Real-world tips for setting up flexible, reusable image styles that work across your whole site

# The Modules

- ✓ Media
- ✓ Media Library
- ✓ Focal Point / Crop
- ✓ IEK
- ✓ Responsive Images
- ✓ Asset Injector (temporary)
- ✓ Entity Usage (optional)

# The Steps

- ✓ Add and enable the modules (see next slide)
- ✓ Better image styles (Focal Point)
- ✓ Enable Media in CKEditor
  - ✓ Add View Modes for Images (Structure->View Modes)
  - ✓ Making image styles available in CKEditor - (Image Styles -> Manage Display -> Enable View Modes -> Apply Styles)
- ✓ Adding new Media Types (and why you might want to do that)
- ✓ Add Keywords to all media types (Taxonomy)
- ✓ Usage for Media (Entity Usage)
- ✓ Update the Media View to display and filter by Media Keywords and add link to Usage (Views)
