INTRODUCTION

Dan Hansen

- Lead Developer @ Sevaa Group, Inc.
- Drupal Developer ~15 Years
- Since Drupal 6
- Also enjoy WordPress, data modeling, and weird CSS and JS stuff
- Trivia:

WHAT IS DISPLAY BUILDER?

- **Drupal display building tool**
- **Created for Site Builders**
 - **WYSIWYG drag-and-drop layout creation**
 - **No or low code**
- **Configurable for different roles**
- **Works across different types of Drupal displays:**
 - **Entity views, replacing Layout Builder**
 - **Page displays, replacing Block Layout**
 - **Views displays**

DISPLAY BUILDER & UI SUITE

- Display Builder was created as a natural extension to UI Suite
- UI Suite provides a cohesive set of modules to implement full design systems in Drupal
 - Drupal was always great for low-code data structures and business rules; UI Suite wants to make design have the same low code capabilities
- Same teams work on both
- Maybe core some day?

WHAT ABOUT CANVAS?

THE MODULE FORMERLY KNOWN AS EXPERIENCE BUILDER

- Display Builder is distinct from Drupal Canvas
- Drupal Canvas
 - React-based
 - Only for content
- Display Builder
 - HTMX-based
 - Replaces several different layout techs
 - Built to leverage existing and extended design systems

DEMONSTRATIONS

- Hold on to your hats!
